

## Performance against National Health and Wellbeing Indicators

Indicators 1-9 are measured using the National Health and Care Experience Survey disseminated by the Scottish Government every two years. The latest one was completed in 2019-20.

The methodology was changed by Scottish Government for the 2019-20 survey, on how the responses included in these results are filtered, therefore it is not accurate to compare longitudinally. This is because the question which allow the Scottish Government to ascertain which respondents receive care / support from the Health and Social Care Partnerships was changed and the interpretation of these questions is subjective and varies per respondent.

\*The primary source of data for these indicators are Scottish Morbidity Records (SMRs) which are nationally collected discharge-based hospital records. In accordance with recommendations made by Public Health Scotland (PHS) and communicated to all Health and Social Care Partnerships, the most recent reporting period available is calendar year 2021; this ensures that these indicators are based on the most complete and robust data currently available.
