

REPORT TO: PERFORMANCE & AUDIT COMMITTEE – 24 MAY 2023

REPORT ON: DUNDEE HEALTH AND SOCIAL CARE PARTNERSHIP PERFORMANCE REPORT – 2022-23 QUARTER 3

REPORT BY: CHIEF FINANCE OFFICER

REPORT NO: PAC17-2023

1.0 PURPOSE OF REPORT

1.1 The purpose of this report is to update the Performance and Audit Committee on 2022-23 Quarter 3 performance against the National Health and Wellbeing Indicators and 'Measuring Performance Under Integration' indicators. Data is also provided in relation to Social Care – Demand for Care at Home services.

2.0 RECOMMENDATIONS

It is recommended that the Performance & Audit Committee (PAC):

- 2.1 Note the content of this summary report.
- 2.2 Note the performance of Dundee Health and Social Care Partnership, at both Dundee and Local Community Planning Partnership (LCPP) levels, against the National Health and Wellbeing Indicators as summarised in Appendix 1 (tables 1, 2 and 3).
- 2.3 Note the performance of Dundee Health and Social Care Partnership against the 'Measuring Performance Under Integration' indicators as summarised in Appendix 1 (table 3).
- 2.4 Note the number of people waiting for social care assessment and care at home package and associated hours of care yet to be provided in Appendix 2.

3.0 FINANCIAL IMPLICATIONS

3.1 None.

4.0 BACKGROUND INFORMATION

4.1 Since the last reporting period, work has been completed to review the usefulness of providing Statistical Process Control (SPC) charts to identify special cause variation in performance (i.e. variations in performance that sit outwith the expected normal range). The findings were that whilst SPC is a useful method, it is most beneficial when focused on weekly or daily data trends and when used to support improvement activity at an operational level. When SPC was applied to the quarterly available National Indicators the reduced activity and subsequent increase following remobilisation due the Pandemic were identified as special cause variation, however data was not detailed enough to identify other variation. Additionally the National Indicators are related to very wide and complex systems and therefore SPC variation could be attributed to several reasons. Limiting the usefulness of the analysis for improvement purposes. For this reason, the use of SPC within quarterly performance reports will not be pursued any further.

4.2 Quarterly and locality data for readmissions within 28 days, has been included for the first time since Q1 2021/22. A Short Life Working Group has now reached the stage of having as high a level of confidence as is proportionate, given limited analytical resources, in the local data and local calculation methodology. This provides the foundation for moving forward with further work in two areas: data definitions and quality and, analysis to inform improvement. The working group anticipate submitting a full analytical report to the Performance and Audit Committee on 27 September 2023. A detailed explanation is available in report PAC16-2023.

5.0 QUARTER 3 PERFORMANCE 2022-23 – KEY ANALYTICAL MESSAGES

5.1 Key analytical messages for the Quarter 3 2022/23 period are:

- Significant variation by Local Community Planning Partnership (LCPP) is still apparent, with poorest performance for many of the National Indicators in the most deprived LCPPs.
- Performance poorer than the 2015/16 baseline for rate of emergency admissions 18+, hospital admissions due to a fall 65+, A+E attendances 18+, emergency admission numbers from A+E 18+, emergency admissions as a rate of all A+E attendances 18+, 28 day readmissions, % care services graded good, standard bed days lost to delayed discharges 75+.
- Despite having a deteriorating rate of emergency admissions 18+, with performance across most LCPPs being poorer than the 2015/16 baseline, performance is 2nd best out of the 8 family group partnerships. Although performance is poorest out of the 3 Tayside Partnerships.
- The number of emergency admissions from A+E has increased over the last 4 quarters and particularly between Q2 (7880) and Q3 (8134) although the number of emergency admissions as a rate per 1,000 of all A+E attendances has decreased over the last 4 quarters (both are higher than the 2015/16 baseline).
- The rate of emergency bed days 18+ has reduced since 2015/16, which is an improvement although the rate has increased (deteriorated) in Maryfield by 5.5% and Strathmartine (6.8%). Performance is best in the family group but 3rd out of the 3 Tayside Partnerships.
- The rate of readmissions within 28 days of discharge increased by 4.9% from the 15/16 baseline although has maintained a stable rate since 2018/19, sitting between 139 and 140 each year. There is variation by LCPP with rates ranging from 114 in The Ferry to 167 in Coldside. A Short Life Working Group is completing further analysis by Scottish Index of Multiple Deprivation (SIMD), gender and age in order to further understand this variation
- 91.7% of the last 6 months of life was spent at home or in a community setting and this is higher than the 2015/16 baseline of 86.6% (improvement) and although performance across Scotland is similar, it is 5th out of the 8 family group partnership and is 3rd out of the 3 Tayside partnerships.
- Rate of hospital admissions due to a fall for aged 65+ is 36% higher than the 2015/16 baseline and is higher in every LCPP. Dundee is the 2nd poorest (behind Glasgow) of the 8 family group partnerships and poorest out of the 3 Tayside partnerships. The Falls Data Group continues to meet to understand and ultimately improve this performance.
- % care services graded 'good' (4) or better in Care Inspectorate inspections has deteriorated since the 2015/16 baseline.
- Rate of bed days lost to a standard delayed discharge for age 75+ is 35% more than the 2015/16 baseline and performance deteriorated in The Ferry (by 101%), East End (by 85%), North East (by 49%), Lochee (by 41%), Strathmartine (by 35%) and Coldside (by

5%). However, there has been a decrease since Q1. At Q3 the LCPP with the highest rate was East End (1205) and the LCPP with the lowest rate was Maryfield (517).

- Rate of bed days lost to complex (code 9) delayed discharge for age 75+ is 45% less than the 2015/16 baseline, with increases across 2 LCPPs (Maryfield and The Ferry). Performance has deteriorated over the last 4 quarters. The Discharge Management report which provides in depth analysis regarding delays, along with an operational and strategic update will be available at the next PAC (September 2023).

5.2 Public Health Scotland publishes a four week snapshot of the demand for Care at Home services provided by Health and Social Care Partnerships across Scotland. The information in Appendix 2 shows the number of people waiting for an assessment for a package of care to allow them to live at home or in the community and also the number of hours of care that has been assessed but not yet delivered. The information is presented by people waiting in hospital or waiting at home / in the community for the care at home service to be delivered. In Dundee, as at 20 March 2023:

- 0 people waited in hospital and 57 people waited in the community for a social care assessment. This is an overall decrease over the previous 4 weeks from 41 people waiting in the community at 13 February 2024.
- 0 people have waited in hospital each week since 24 October 2022.
- 51 people were assessed and were waiting in hospital for a care at home package and is the lowest it has been in the previous 6 weeks.
- 174 people were assessed and were waiting in the community for a care at home package and is the lowest it has been in the last 15 weeks.
- 51 people were assessed and waiting for a care at home package in hospital (858 hours yet to be provided). This is the lowest number of hours waiting to be provided in the last 7 weeks.
- 174 people were assessed and waiting for a care at home package in the community (1,367 hours yet to be provided). This is the lowest number of hours waiting to be provided in the last 16 weeks.
- For those already in receipt of a care at home package 378 additional hours were required and not provided. This is the lowest number of hours waiting to be provided in the last 10 weeks.

The Integration Joint Board has recently received a report regarding the management of demand for social care supports (Article X of the minute of the meeting of the Dundee Integration Joint Board held on 14 December 2022 refers), with PAC having received a detailed report on discharge management (including delays associated with social care assessment and provision) in November 2022 (Article VII of the minute of the meeting of Dundee IJB Performance and Audit Committee refers). The next report will be available at to PAC when they meet in September 2023.

6.0 POLICY IMPLICATIONS

6.1 This report has been subject to the Pre-IIA Screening Tool and does not make any recommendations for change to strategy, policy, procedures, services or funding and so has not been subject to an Integrated Impact Assessment. An appropriate senior manager has reviewed and agreed with this assessment.

7.0 RISK ASSESSMENT

Risk 1 Description	Poor performance against national indicators could affect outcomes for individuals and their carers, spend associated with poor performance and the ability of the IJB to deliver fully commitments set out in the Strategic and Commissioning Plan.
Risk Category	Financial, Governance, Political
Inherent Risk Level	Likelihood 3 x Impact 5 = Risk Scoring 15 (which is an Extreme Risk Level)
Mitigating Actions (including timescales and resources)	<ul style="list-style-type: none"> - Continue to develop a reporting framework which identifies performance against national and local indicators. - Continue to report data quarterly to the PAC to highlight areas of exceptional performance (poor and excellent). - Continue to support operational managers by providing in depth analysis regarding areas of poor performance, such as around readmissions to hospital and falls related hospital admissions. - Continue to ensure that data informs operational practices and improvements and also that operational activities and priorities are used to interpret trends shown by the data. - Work with operational managers, through a recommencement of the Performance and Finance Group, to identify areas of poor performance that result in operational risk and undertake additional analysis as required.
Residual Risk Level	Likelihood 3 x Impact 3 = Risk Scoring 9 (which is a Moderate Level)
Planned Risk Level	Likelihood 2 x Impact 3 = Risk Scoring 6 (which is a Moderate Risk Level)
Approval recommendation	Given the moderate level of planned risk, this risk is deemed to be manageable.

8.0 CONSULTATIONS

8.1 The Chief Officer, Heads of Service, Health and Community Care and the Clerk were consulted in the preparation of this report.

9.0 BACKGROUND PAPERS

9.1 None.

APPENDIX 2 SUMMARY OF SOCIAL CARE – DEMAND FOR CARE AT HOME SERVICES DUNDEE

This report is an assessment of the demand for Care at Home services provided by Health and Social Care Partnerships. The information shows the number of people waiting for an assessment for a package of care to allow them to live at home or in the community and also the number of hours of care that has been assessed but not yet delivered. The information is presented by people waiting in hospital or waiting at home/community for the care at home service to be delivered.

The data included in this publication is management information which Health and Social Care partnerships began submitting in August 2021. This data collection is still under development and requires further work on the consistency of the recording of the information across Health and Social Care Partnerships.

Chart 1 Number of people waiting for social care assessment

In Dundee as at 20th March 2023

- 0 people waited in hospital and 57 people waited in the community for a social care assessment. This is an overall decrease over the previous 4 weeks from 41 people waiting in the community at 13 February 2024.
- 0 people have have waited in hospital each week since 24 October 2022

Chart 2 Number of people assessed and waiting for a Care at Home Package

In Dundee as at 20th March 2023

- 51 people were assessed and were waiting in hospital for a care at home package and is the lowest it has been in the previous 6 weeks.
- 174 people were assessed and were waiting in the community for a care at home package and is the lowest it has been in the last 15 weeks.

Chart 3 Number of hours of care at home yet to be provided

- 51 people were assessed and waiting for a care at home package in hospital (858 hours yet to be provided). This is the lowest number of hours waiting to be provided in the last 7 weeks.
- 174 people were assessed and waiting for a care at home package in the community (1,367 hours yet to be provided). This is the lowest number of hours waiting to be provided in the last 16 weeks.
- For those already in receipt of a care at home package 378 additional hours were required and not provided. This is the lowest number of hours waiting to be provided in the last 10 weeks.

APPENDIX 3 – DATA SOURCES USED FOR MEASURING PERFORMANCE

The Quarterly Performance Report analyses performance against National Health and Wellbeing Indicators 1-23 and Measuring Performance Under Integration (MPUI) indicators. 5 of the 23 National Health and Wellbeing Indicators are monitored quarterly (emergency admissions, emergency bed days, readmissions, falls admissions and delayed discharge bed days lost. Data is provided both at Dundee and Local Community Planning Partnership (LCPP) level (where available). Data is currently not available for eight out of the 13 National Indicators which are not reported using The Health and Social Care Experience Survey (see section 4.3). The Scottish Government and Public Health Scotland are working on the development of definitions and datasets to calculate these indicators nationally.

The National Health and Wellbeing Indicators 1-9 are reported from The Health and Social Care Experience Survey administered by the Scottish Government which is conducted biennially. Full details were provided to the PAC in February 2021 (Article V of the minute of the Dundee Performance and Audit Committee held on 3 February 2021 refers). The Scottish Government changed the methodology used to filter responses to reflect people who receive services from the Partnership and therefore it is not possible to longitudinally compare results for National Indicators 1-7 and 9.

The quarterly performance report also summarises performance against indicators in the Measuring Performance Under Integration (MPUI) suite of indicators for four out of six high level service delivery areas – emergency admissions, emergency bed days, accident and emergency and delayed discharges, end of life and balance of care. In November 2020 the Performance and Audit Committee agreed that targets should not be set for 2020/21 for these indicators, however that the indicators should continue to be monitored in quarterly performance reports submitted to the PAC (Article VI of the minute of the Dundee Performance and Audit Committee held on 24 November 2020 refers).

National data is provided to all partnerships, by Public Health Scotland. This data shows rolling¹ monthly performance for emergency admissions, emergency admissions from accident and emergency, accident and emergency attendances, emergency bed days and delayed discharges. Previously Public Health Scotland were only able to provide data for all ages, however following feedback from Dundee and other Partnerships they have now provided data for people age 18+.

It was agreed at the PAC held on 19 July 2017 (Article VIII of the minute of the meeting refers) that local data, provided by the NHS Tayside Business Unit will be used to produce more timeous quarterly performance reports against the National Health and Wellbeing Indicators. NHS Tayside Business Unit has provided data for emergency admissions, emergency bed days, readmissions, delayed discharges and falls. From quarter 1 2020/21 the NHS Tayside Business Unit has been providing breakdowns of covid and non covid admission reasons for emergency admissions and emergency bed days.

Data provided by NHS Tayside differs from data provided by Public Health Scotland (PHS); the main differences being that NHS Tayside uses 'board of treatment' and PHS uses 'board of residence' and NHS Tayside uses an admissions based dataset whereas PHS uses a discharge based dataset (NHS Tayside records are more complete but less accurate as PHS data goes through a validation process). As PHS data is discharge based, numbers for one quarter will have been updated the following quarter as records get submitted for those admitted one quarter and discharged a subsequent quarter. By the time PHS release their data, records are (in most cases) 99% complete. The data provided by NHS Tayside Business Unit is provisional and figures should be treated with caution.

¹ Rolling data is used so that quarterly data can be compared with financial years. This means that data for Quarter 3 shows the previous 12 months of data including the current quarter. Therefore, Quarter 3 data includes data from 1 January 2022 to 31 December 2022.
